Purpose of These Standards

These standards were developed to guide the preparation, certification, and professional development of those who teach reading and related literacy skills in classroom or other settings. The term teacher is used throughout this document to refer to anyone whose responsibilities include reading instruction. The standards aim to specify what any individual responsible for teaching reading should know and be able to do.

Teacher preparation programs should ascribe to a common set of professional standards for the benefit of the students they serve, including those with diverse learning needs. Adherence to these standards should assure the public that individuals who teach reading are prepared to implement evidence-based and instructionally effective practices for reading instruction.

Background: Why These Standards Are Necessary

Teaching reading effectively requires considerable knowledge and skill. In 2000, the National Reading Panel, drawing upon decades of research, issued a report that identified the five reading skills necessary to become a successful reader: phonemic awareness, phonics, fluency, vocabulary, and comprehension. The report cited the need for highly qualified teachers, but did not spell out the knowledge and skill base necessary to teach students to become successful readers.

The National Assessment of Educational Progress consistently finds that about 36% of all fourth graders read at a level described as “below basic.” Included in this group are students living in poverty, English language learners, and students who demonstrate significant weaknesses with language processes, including but not limited to phonological processing, that are the root cause of dyslexia and related learning difficulties. Of those who are referred to special education services in public schools, approximately 85% are referred because of their problems with language, reading, and/or writing.

The Common Core State Standards, adopted by the majority of states, and other college and career readiness standards, require a shift towards more rigorous expectations for students in reading and writing. Students are required to read complex text efficiently and with high levels of comprehension. This expectation includes students with reading disabilities, and those who struggle for other reasons, such as a language barrier. The Standards focus on the teacher knowledge and skills required to teach these and other standards.

Mastering the Common Core or similar college readiness standards is a challenge for many with reading difficulties. However, informed and effective classroom instruction, especially in the early grades, can prevent most reading problems from developing and ameliorate others. For those students with dyslexia or other learning difficulties, effective intervention from a well-trained instructor can lessen the impact of reading difficulties and increase student success.
How to Use These Standards

The standards outline the 1) content knowledge necessary to teach reading and writing to all students, including those who are at risk for reading difficulty; and 2) practices of effective instruction. Teachers should have the foundational knowledge of language, literacy development, and individual differences to serve all the children in their classroom.

The standards may be used for several purposes, including but not limited to:
- self-study through professional learning communities and other peer collaboration groups;
- course design within teacher certification programs;
- practicum requirements within certification programs;
- professional development efforts
- a content framework for the development of licensing or certification examinations.

How to Read the Standards

The Standards include two major sections. Section I addresses foundation concepts, knowledge of language structure, the principles of structured language teaching, administration and interpretation of assessments, knowledge of dyslexia and other learning disorders, and ethical standards for the profession. Section II addresses the application skills teachers and specialists should demonstrate.

In Section I, Standards A, B, C, and E are presented in two columns. The column on the left refers to content knowledge that can be learned and tested independent of observed teaching competency. The column on the right delineates the practical skills of teaching that depend on or that are driven by content knowledge. The exception to this format is Standard D. It includes a third column on the right that specifies in greater detail what the teacher or specialist should be able to do.

Section II addresses skills to be demonstrated in supervised practice by novice teachers in training, designated Level 1, or by specialists, designated as Level 2. The recommended standards for preparation of teachers and specialists provided in this section are distinguished by these two levels.
Section I: Knowledge And Practice Standards

A. Foundation Concepts about Oral and Written Learning

Unlike learning to speak, which occurs when children hear speech in their environment, learning to read does not happen naturally. Most children must be taught foundational concepts of reading. Recently, a convergence of research has identified what children must be taught and how best to teach those skills. The skills include processing of oral language at the phonemic level, the alphabetic principle, and metacognitive strategies. Teachers need to know how to teach these skills and how to support the development of psychological processes such as executive function and working memory, and how to promote motivation to read.

Oral and written language contributes reciprocally to the development of each and both impact the ability to read and write. Receptive and expressive oral language contributes to the ability to listen and to speak; receptive understanding of written language contributes to reading comprehension while expressive use of spoken language contributes to the ability to write.

B. Knowledge of the Structure of Language

All students require and benefit from knowledge about the structure of their language; such knowledge is essential for struggling readers. To teach students effectively, teachers need in-depth knowledge about the structure of language including the ability to recognize whether words are phonetically regular or irregular, common morphemes in words, and common sentence structure in English. Without this kind of knowledge, teachers may have difficulty interpreting assessments correctly, or they may provide unintentionally confusing instruction to students. Similarly, to teach spelling and writing effectively, teachers need a knowledge base about language structure, including sentence and discourse structure. Research suggests that for teachers to acquire an understanding of language structure, they need explicit and in-depth instruction in this area.

C-1. Structured Language Teaching: Phonology

Phonological awareness, basic print concepts, and knowledge of letter sounds are important foundational areas of literacy for all students. Ample research exists to inform teaching of phonological awareness, including research on the phonological skills to emphasize in instruction, appropriate sequencing of instruction, and integrating instruction in phonological awareness with instruction in alphabet knowledge. Poor phonological awareness is a core weakness for students with dyslexia. Without early, research-based intervention, children who struggle in these areas are likely to continue to have reading difficulties. It is important for teachers to understand how to teach these foundational skills, especially to effectively prevent or ameliorate many children’s reading problems, including those of students with dyslexia.

<table>
<thead>
<tr>
<th>Content Knowledge</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Identify the general and specific goals of phonological skill instruction.</td>
<td>1. Explicitly state the goal of any phonological awareness teaching activity (Level 1).</td>
</tr>
</tbody>
</table>
| 2. Know the progression of phonological skill development (i.e., rhyme, syllable, onset-rime, phoneme differentiation). | 2. a. Select and implement activities that match a student’s developmental level of phonological skill (Level 1).  
   b. Design and justify the implementation of activities that match a student’s developmental level of phonological skill (Level 2). |
| 3. Identify the differences among various phonological manipulations, including identifying, matching, blending, segmenting, substituting, and deleting sounds. | 3. Demonstrate instructional activities that identify, match, blend, segment, substitute, and delete sounds (Level 1). |
| 4. Understand the principles of phonological skill instruction: brief, multisensory, conceptual, and auditory-verbal. | 4. a. Successfully produce vowel and consonant phonemes (Level 1).  
   b. Teach articulatory features of phonemes and words; use minimally contrasting pairs of sounds and words in instruction; support instruction with manipulative materials and movement (Level 2). |
5. Understand the reciprocal relationships among phonological processing, reading, spelling, and vocabulary.

| 5. a. Direct students’ attention to speech sounds during reading, spelling, and vocabulary instruction using a mirror, discussion of articulatory features, and so on as scripted or prompted (Level 1). |
| 5. b. Direct students’ attention to speech sounds during reading, spelling, and vocabulary instruction without scripting or prompting (Level 2). |

6. Understand the phonological features of a second language or dialect, such as Spanish, and how they may interfere with English pronunciation and phonics.

| 6. Explicitly contrast first and second language phonological systems, as appropriate, to anticipate which sounds may be most challenging for the second language learner (Level 2). |
The development of accurate word decoding skills—that is, the ability to read unfamiliar words by applying phonics knowledge—is an essential foundation for reading comprehension for all students. Teachers require the ability to provide explicit, systematic, appropriately sequenced instruction in phonics to all students. This is critical in helping to prevent reading problems in beginning readers. Decoding skills are often a central weakness for students with learning disabilities in reading, especially those with dyslexia. For this population, teachers should also understand the usefulness of multisensory, multimodal techniques to focus students’ attention on printed words, engage students, and enhance memory and learning.

<table>
<thead>

<tr>
<td>1. Know or recognize how to order phonics concepts from easier to more difficult.</td>
<td>1. Plan lessons with a cumulative progression of word recognition skills that build one on another (Level 1).</td>
</tr>
<tr>
<td>2. Understand principles of explicit and direct teaching: model, lead, give guided practice, and review.</td>
<td>2. Explicitly and effectively teach (e.g., information taught is correct, students are attentive, teacher checks for understanding, teacher scaffolds students’ learning) concepts of word recognition and phonics; apply concepts to reading single words, phrases, and connected text (Level 1).</td>
</tr>
<tr>
<td>3. State the rationale for multisensory and multimodal techniques.</td>
<td>3. Demonstrate the simultaneous use of two or three learning modalities (to include listening, speaking, movement, touch, reading, and/or writing) to increase engagement and enhance memory (Level 1).</td>
</tr>
<tr>
<td>4. Know the routines of a complete lesson format, from the introduction of a word recognition concept to fluent application in meaningful reading and writing.</td>
<td>4. Plan and effectively teach all steps in a decoding lesson, including single-word reading and connected text that is read fluently, accurately, and with appropriate intonation and expression (Level 1).</td>
</tr>
<tr>
<td>5. Understand research-based adaptations of instruction for students with weaknesses in working memory, attention, executive function, or processing speed.</td>
<td>5. Adapt the pace, format, content, strategy, or emphasis of instruction according to students’ pattern of response (Level 2).</td>
</tr>
</tbody>
</table>
C-3. Structured Language Teaching: Fluent, Automatic Reading of Text

Reading fluency is the ability to read text effortlessly and quickly as well as accurately. Fluency develops among typical readers in the primary grades. Because fluency is a useful predictor of overall reading competence, especially in elementary-aged students, a variety of fluency tasks have been developed for use in screening and progress-monitoring measures. Poor reading fluency is a very common symptom of dyslexia and other reading disabilities; problems with reading fluency can linger even when students’ accuracy in word decoding has been improved through effective phonics intervention. Although fluency difficulties may sometimes be associated with processing weaknesses, considerable research supports the role of practice, wide exposure to printed words, and focused instruction in the development and remediation of fluency. To address students’ fluency needs, teachers must have a range of competencies, including the ability to interpret fluency-based measures appropriately, to place students in appropriate types and levels of texts for reading instruction, to stimulate students’ independent reading, and to provide systematic fluency interventions for students who require them. Assistive technology (e.g., text-to-speech software) is often employed to help students with serious fluency difficulties function in general education settings. Therefore, teachers, and particularly specialists, require knowledge about the appropriate uses of this technology.

<table>

</tr>
<tr>
<td>2. Understand reading fluency as a stage of normal reading development; as the primary symptom of some reading disorders; and as a consequence of practice and instruction.</td>
<td>2. Determine which students need a fluency-oriented approach to instruction, using screening, diagnostic, and progress-monitoring assessments (Level 2).</td>
</tr>
<tr>
<td>3. Define and identify examples of text at a student’s frustration, instructional, and independent reading level.</td>
<td>3. Match students with appropriate texts as informed by fluency rate to promote ample independent oral and silent reading (Level 1).</td>
</tr>
<tr>
<td>4. Know sources of activities for building fluency in component reading skills.</td>
<td>4. Design lesson plans that incorporate fluency-building activities into instruction at sub-word and word levels (Level 1).</td>
</tr>
<tr>
<td>5. Know which instructional activities and approaches are most likely to improve fluency outcomes.</td>
<td>5. Design lesson plans with a variety of techniques to build reading fluency, such as repeated readings of passages, alternate oral reading with a partner, reading with a tape, or rereading the same passage up to three times. (Level 1).</td>
</tr>
<tr>
<td>6. Understand techniques to enhance student motivation to read.</td>
<td></td>
</tr>
<tr>
<td>---</td>
<td></td>
</tr>
<tr>
<td>7. Understand appropriate uses of assistive technology for students with serious limitations in reading fluency.</td>
<td></td>
</tr>
<tr>
<td>6. Identify student interests and needs to motivate independent reading (Level 1).</td>
<td></td>
</tr>
<tr>
<td>7. Make appropriate recommendations for use of assistive technology in general education classes for students with different reading profiles (e.g., dyslexia versus language disabilities) (Level 2).</td>
<td></td>
</tr>
</tbody>
</table>
C-4. Structured Language Teaching: Vocabulary

Vocabulary, or knowledge of word meanings, plays a key role in reading comprehension. Knowledge of words is multifaceted, ranging from partial recognition of the meaning of a word to deep knowledge and the ability to use the word effectively when speaking or writing. Research supports both explicit, systematic teaching of word meanings and indirect methods of instruction such as those involving inferring meanings of words from sentence context or from word parts (e.g., common roots and affixes). Teachers should know how to develop students’ vocabulary knowledge through both direct and indirect methods. They also should understand the importance of wide exposure to words through reading and listening, to students’ vocabulary development. For students with dyslexia and other reading problems, oral vocabulary knowledge is frequently strong, but over time, low volume of reading may tend to reduce these students' exposure to rich vocabulary relative to their typical peers. Explicit teaching of word meanings and encouragement of wide independent reading in appropriate texts are ways to help increase vocabulary development.

<table>
<thead>
<tr>
<th>Content Knowledge</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Understand the role of vocabulary development and vocabulary knowledge in comprehension.</td>
<td>1. Teach word meanings directly using contextual examples, structural (morpheme) analysis, antonyms and synonyms, definitions, connotations, multiple meanings, and semantic feature analysis (Levels 1 and 2).</td>
</tr>
<tr>
<td>2. Understand the role and characteristics of direct and indirect (contextual) methods of vocabulary instruction.</td>
<td>2. Lesson planning reflects:</td>
</tr>
<tr>
<td>3. Know varied techniques for vocabulary instruction before, during, and after reading.</td>
<td>a. Selection of material for read-alouds and independent reading that will expand students’ vocabulary.</td>
</tr>
<tr>
<td>4. Understand that word knowledge is multifaceted.</td>
<td>b. Identification of words necessary for direct teaching that should be known before the passage is read.</td>
</tr>
<tr>
<td>5. Understand the sources of wide differences in students’ vocabularies.</td>
<td>c. Repeated encounters with new words and multiple opportunities to use new words orally and in writing.</td>
</tr>
<tr>
<td></td>
<td>d. Recurring practice and opportunities to use new words in writing and speaking.</td>
</tr>
</tbody>
</table>
C-5. Structured Language Teaching: Text Comprehension

Reading comprehension is the ultimate goal of reading instruction. Reading comprehension depends not only upon the component abilities discussed in previous sections, but also upon other factors, such as background knowledge and knowledge of text structure. Comprehension, background knowledge, and motivation are closely tied. Comprehension is easier when background knowledge is high, which in turn increases motivation. Equally, readers most likely will have more background knowledge in areas in which they are motivated to read, which increases comprehension. Appendix A provides references on motivation.

In order to plan effective instruction and intervention in reading comprehension, teachers must understand the array of abilities that contribute to reading comprehension and use assessments to help pinpoint students’ weaknesses. For instance, a student with dyslexia, whose reading comprehension problems are associated mainly with poor decoding and dysfluent reading, will need different emphases in intervention than will a student with poor comprehension due to weaknesses in vocabulary and oral comprehension. Teachers must be able to model and teach research-based comprehension strategies, such as summarization and the use of graphic organizers, and apply methods that promote reflective reading, metacognition, and student engagement. Oral comprehension and reading comprehension have a reciprocal relationship; effective oral comprehension facilitates reading comprehension, and wide reading contributes to the development of oral comprehension. Teachers should understand the relationships among oral language, reading comprehension, and written expression, and they should be able to use appropriate writing activities to build students’ comprehension. Teachers should also have a rich understanding of children’s literature and how best to utilize it with a diverse group of learners.

<table>
<thead>
<tr>
<th>Content Knowledge</th>
<th>Application</th>
</tr>
</thead>
<tbody>
<tr>
<td>1. Be familiar with teaching strategies that are appropriate before, during, and after reading and that promote reflective reading.</td>
<td>1. a. State purpose for reading, elicit or provide background knowledge, and explore key vocabulary (Level 1).</td>
</tr>
<tr>
<td>2. Contrast the characteristics of major text genres, including narration, exposition, and argumentation.</td>
<td>b. Query during text reading to foster attention to detail, inference making, and mental model construction (Level 1).</td>
</tr>
<tr>
<td>3. Understand the similarities and differences between written composition and text comprehension, and the usefulness of writing in building comprehension.</td>
<td>c. Use graphic organizers, note-taking strategies, retelling and summarizing, and cross-text comparisons (Level 1).</td>
</tr>
<tr>
<td></td>
<td>2. Lesson plans reflect a range of genres, with emphasis on narrative and expository texts (Level 1).</td>
</tr>
<tr>
<td></td>
<td>3. Model, practice, and share written responses to text; foster explicit connections between new learning and what was already known (Level 1).</td>
</tr>
</tbody>
</table>
4. Identify in any text the phrases, clauses, sentences, paragraphs and “academic language” that could be a source of miscomprehension.

5. Understand levels of comprehension including the surface code, text base, and mental model (situation model).

6. Understand factors that contribute to deep comprehension, including background knowledge, vocabulary, verbal reasoning ability, knowledge of literary structures and conventions, and use of skills and strategies for close reading of text.

4. Anticipate confusions and teach comprehension of figurative language, complex sentence forms, cohesive devices, and unfamiliar features of text (Level 2).

5. Plan lessons to foster comprehension of the surface code (the language), the text base (the underlying ideas), and a mental model (the larger context for the ideas) (Level 2).

6. Adjust the emphasis of lessons to accommodate learners’ strengths and weaknesses and pace of learning (Level 2).
C-6. Structured Language Teaching: Handwriting, Spelling, and Written Expression

Just as teachers need to understand the component abilities that contribute to reading comprehension, they also need a componential view of written expression. Important component abilities in writing include basic writing (transcription) skills such as handwriting, keyboarding, spelling, capitalization, punctuation, and grammatical sentence structure; text generation (composition) processes that involve translating ideas into language, such as appropriate word choice, writing clear sentences, and developing an idea across multiple sentences and paragraphs; and planning, revision and editing processes. Effective instruction in written expression depends on teachers’ abilities to provide explicit, systematic teaching in each area, as well as to pinpoint an individual student’s weaknesses in these different component areas of writing. Teachers must also be able to teach research-based strategies in written expression, such as those involving strategies for planning and revising compositions. They should understand the utility of multisensory methods in both handwriting and spelling instruction. Assistive technology can be especially helpful for students with writing difficulties. Teachers should recognize the appropriate uses of technology in writing (e.g., spell-checkers can be valuable but do not replace spelling instruction and have limited utility for students whose misspellings are not recognizable). Specialists should have even greater levels of knowledge about technology.

</table>
D. Interpretation and Administration of Assessments for Planning Instruction

Teachers work hard to understand what students have learned. A teacher’s ability to administer and interpret assessments accurately is essential both to planning effective instruction and to early identification of students’ learning problems. Appropriate assessments enable teachers to recognize early signs that a child is either on track or may not be progressing as expected in reading development. Effective assessment helps teachers identify students who may be at risk for dyslexia or other learning disabilities. Carefully developed assessment practices permit teachers to target instruction to meet individual student’s needs and recognize when to refer students for more extensive diagnostic assessment.

It is important to understand that there are different types of assessments for different purposes (e.g., brief but frequent assessments to monitor progress in specific skills versus more lengthy, comprehensive assessments to provide detailed diagnostic information). Such assessments are an important component of frameworks of multi-tiered systems of support or response to intervention. It is also important to recognize which type of assessment is called for in a particular situation, where to find unbiased information about the adequacy of published tests, and how to interpret this information correctly. It is important for teachers to understand basic principles of test construction and concepts such as reliability and validity. They should also understand how an individual student’s component profile may influence his or her performance on a particular test, especially on broad measures of reading comprehension and written expression. For example, a child with very slow reading is likely to perform better on an untimed measure of reading comprehension than on a stringently timed measure; a child with writing problems may perform especially poorly on a reading comprehension test that requires lengthy written responses to open-ended questions.

Understanding assessment enables teachers to help students form positive perceptions of themselves as readers and acquire a love of reading so important for academic success. Classroom teachers use assessment to ensure children are gaining the necessary foundational skills in reading so students feel confident engaging in reading for continuous, lifelong enjoyment and learning.

<td>1. Understand the differences among screening, diagnostic, outcome, and progress-monitoring assessments.</td>
<td>1. Match each type of assessment and its purpose (Level 1).</td>
<td>1. Administer screenings and progress monitoring assessments (Level 1)</td>
</tr>
<tr>
<td>2. Understand basic principles of test construction, including reliability, validity, and norm-referencing, and know the most well-validated screening tests designed to identify</td>
<td>2. Match examples of technically adequate, well-validated screening, diagnostic, outcome, and progress-monitoring assessments (Level 1).</td>
<td>2. Explain why individual students are or are not at risk in reading based on their performance on screening assessments (Level 1).</td>
</tr>
</tbody>
</table>
3. Understand the principles of progress-monitoring and the use of graphs to indicate progress.

3. Using case study data, accurately interpret progress-monitoring graphs to decide whether or not a student is making adequate progress (Level 1).

3. Display progress-monitoring data in graphs that are understandable to students and parents (Level 1).

4. Know the range of skills typically assessed by diagnostic surveys of phonological skills, decoding skills, oral reading skills, spelling, and writing.

4. Using case study data, accurately interpret subtest scores from diagnostic surveys to describe a student’s patterns of strengths and weaknesses and instructional needs (Level 2).

4. Administer educational diagnostic assessments using standardized procedures (Level 2).

5. Recognize the content and purposes of the most common diagnostic tests used by psychologists and educational evaluators.

5. Find and interpret appropriate print and electronic resources for evaluating tests (Level 1).

5. Write reports that clearly and accurately summarize a student’s current skills in important component areas of reading and reading comprehension (Level 2).

6. Interpret measures of reading comprehension and written expression in relation to an individual child’s component profile.

6. Using case study data, accurately interpret a student’s performance on reading comprehension or written expression measures and make appropriate instructional recommendations.

6. Write appropriate, specific recommendations for instruction and educational programming based on assessment data (Level 2).
E. Knowledge of Dyslexia and Other Learning Disorders

To identify children with dyslexia and other learning disabilities, teachers need to be able to recognize the key symptoms of these disorders, as well as how the disorders differ from each other. These standards are supported by research and by accepted diagnostic guidelines. It is important that teachers recognize the following characteristics of dyslexia in relation to other reading problems and learning difficulties:

- Dyslexia is a language-based neurological disorder of learning to read and write originating from a core or basic problem with phonological processing intrinsic to the individual. Its primary symptoms are inaccurate and/or slow printed word recognition and poor spelling – problems that in turn affect reading fluency and comprehension and written expression. Other types of reading disabilities include specific difficulties with reading comprehension and/or speed of processing (reading fluency). These problems may exist in relative isolation or may overlap extensively in individuals with reading difficulties.
- Dyslexia often exists in individuals with aptitudes, talents, and abilities that enable them to be successful in many domains.
- Dyslexia often coexists with other developmental difficulties and disabilities, including problems with attention, memory, and executive function.
- Dyslexia exists on a continuum. Many students with milder forms of dyslexia are never officially diagnosed and are not eligible for special education services. They deserve appropriate instruction in the regular classroom and through other intervention programs.
- Appropriate recognition and treatment of dyslexia is the responsibility of all educators and support personnel in a school system, not just the reading or special education teacher.
- Although early intervention is the most effective approach, individuals with dyslexia and other reading difficulties can be helped at any age.
- Students who are English language learners may have dyslexia or other reading difficulties. It is important for educators to determine if a student’s difficulties are based in second language acquisition or due to a reading difficulty.

In order to plan instruction and detect older students with learning disabilities who may have been overlooked in the early grades, teachers also should understand how students’ difficulties may change over time, based on developmental patterns, experience, and instruction, and increased expectations across grades.

</thead>
<tbody>
<tr>
<td>1. Understand the most common intrinsic differences between good and poor readers (i.e., cognitive, neurobiological, and linguistic).</td>
<td>1. a. Recognize scientifically accepted characteristics of individuals with poor word recognition (e.g., overdependence on context to aid word recognition; inaccurate nonword reading) (Level 1). b. Identify student learning behaviors and test profiles typical of students with dyslexia and related learning difficulties. (Level 2).</td>
</tr>
<tr>
<td>2. Recognize the tenets of the NICHD/IDA definition of dyslexia.</td>
<td>2. Explain the reasoning or evidence behind the main points in the definition (Level 1).</td>
</tr>
</tbody>
</table>
3. Recognize that dyslexia and other reading difficulties exist on a continuum of severity.

4. Identify the distinguishing characteristics of dyslexia and related reading and learning disabilities (including developmental language comprehension disorder, attention deficit hyperactivity disorder, disorders of written expression or dysgraphia, mathematics learning disorder, nonverbal learning disorders, etc.).

5. Identify how symptoms of reading difficulty may change over time in response to development and instruction.

6. Understand federal and state laws that pertain to learning disabilities, especially reading disabilities and dyslexia.

3. Recognize levels of instructional intensity, duration, and scope appropriate for mild, moderate, and severe reading disabilities (Level 1).

4. Match symptoms of the major subgroups of poor readers as established by research, including those with dyslexia, and identify typical case study profiles of those individuals (Level 2).

5. Identify predictable ways that symptoms might change as students move through the grades (Level 2).

6. a. Explain the most fundamental provisions of federal and state laws pertaining to the rights of students with disabilities, especially students’ rights to a free, appropriate public education, an individualized educational plan, services in the least restrictive environment, and due process (Level 1).

   b. Appropriately implement federal and state laws in identifying and serving students with learning disabilities, reading disabilities, and dyslexia (Level 2).
Section II: Guidelines Pertaining to Supervised Practice of Teachers Who Work in School Settings

In addition to providing the necessary knowledge base, it is equally important for teacher training programs to provide opportunities for teachers to practice effective, evidence-based teaching until they reach the expected level of expertise to ensure student success.

Training programs for pre-service teachers often distinguish levels of expertise by the skills and experience of the individual and the amount of supervised practice required for certification.

Level I individuals are practitioners with basic knowledge who:
1. implement an appropriate program with fidelity
2. formulate and implement an appropriate, differentiated lesson plan
3. demonstrate proficiency to instruct individuals with a reading disability or dyslexia

To attain Level I status, an individual must:
• pass an approved basic knowledge proficiency exam
• demonstrate (over time) instructional proficiency in all Level 1 areas outlined on Knowledge and Practice Standards, Section I that is responsive to student needs
• document significant student progress with formal and informal assessments as a result of the instruction.

To attain Level II status, an individual must:
• pass an approved basic knowledge proficiency exam
• complete a one-to-one practicum with a student or small group of one to three well-matched students who have a documented reading disability. A recognized, certified instructor* provides consistent oversight and observations of instruction delivered to the same student(s) over time, and the practicum continues until expected proficiency is reached.**
• demonstrate (over time) instructional proficiency in all Level 1 and 2 areas outlined on Standards, Section I that is responsive to student needs.
• provide successful instruction to several individuals with dyslexia who demonstrate varying needs and document significant student progress with formal and informal assessments as a result of the instruction.
• complete an approve educational assessment of a student with dyslexia and/or language-based reading disability, including student history and comprehensive recommendations.

*A recognized or certified instructor is an individual who has met all of the requirements of the level they supervise but who has additional content knowledge and experience in implementing and observing instruction for students with dyslexia and other reading difficulties in varied settings. A recognized instructor has been recommended by or certified by an approved trainer mentorship program that meets these standards. The trainer mentorship program has been reviewed by and approved by the Standards and Practices Committee.

**Documentation of proficiency must be 1) completed by a recognized/certified instructor providing oversight in the specified program; 2) completed during full (not partial) lesson observations; and 3) must occur at various intervals throughout the instructional period with student.

Appendix A: Motivation

While researchers have studied motivation from a variety of perspectives, it is clear that motivation plays a major role in reading development and achievement. If we want students to become motivated to read and to engage deeply in reading, it is critical that teachers and reading specialists help students build the strong foundational skills that are outlined in the Knowledge and Practice Standards. Mastery of these skills will motivate children to spend more time reading, and increased reading will increase their achievement and academic success. Teachers should also consider individual reading motivators so that students choose to engage in reading for continuous, lifelong enjoyment and learning.
